AEI-016: Degassing of Toluene

Date: 2022-10-28
Tags: AEI Degassed
Status: Done
Created by: Alexander Eith

Reaction scheme/sample structure

Reagents

Name	Amount [mmol]	Equivalents	$Mass_{theo}$ [mg]	$Mass_{exp}$ [mg]	Molar mass [g/mol]	Volume [ml]
Toluene						approx. 500

Procedure/observations

Date	Time	Step	Observations
28.10	11:30	A 500 mL-solvent flask was prepared.	
	13:10	Molar sieve 3 A (approx. 100 mL) was filled in the flask and the atmosphere was subsequently changed to argon.	
31.10	10:30 -11:10	Toluene was transferred into the flask according to [Protocol] Cannula Filtration/Transfer	
	11:15 - 11:50	Argon was sparged through the solution analog to [Protocol] Degassing of fluids for 35 min	
02.11	13:15	Toluene (approx. 0.2 mL) were transferred into a 1 mL-Syringe. The syringe was sealed with a stopper.	202.6 mg
		The stopper from the syringe was removed and the syringe was placed on a scale which was taraed.	
		The Toluene was injected into a KFT-titration automat.	
		The syringe was placed again on the scale.	
21.12	9:00	KFT according to [Protocol] KFT (Karl-Fischer-Titration)	162.6 mg

14.07.23		KFT according to Protocol - KFT (Karl-Fischer-Titration), Jena	454 mg

Analysis

Date	Time	Sample name	Analysis method	Solvent	File name	Interpretation
02.11	13:20		KFT			amount H_2O: 2.8 µg, 13.8 ppm
21.12	9:00		KFT			amount H_2O: 2.4 µg, 14.8 ppm
14.07.23		AE-016	KFT		AE_AE-016_14072023.pdf	amount H_2O: 21.6 µg, 47.6 ppm
